Dear Ms. Bose,

We are writing to respond and comment on the recent Environmental Impact Report that you have submitted regarding Dominion's proposed natural gas exporting facility. We looked into your report and found it to be very thorough and detailed. We also appreciate that you are backing up your findings with 22,000 pages of documentation, and that you spent the better part of 2 years investigating the research data.

We agree that this project would a tremendous boon to the county, and be safely conducted with responsible attention to the environment, leaving no significant impact. Many of our young people coming up need quality employment, and this project would provide just that. Not to mention the positive impact it would have on our tax revenue base. We urge you to adhere to the wishes of our county residents, and confirm your final approval of this important project. The nay-sayers are really not from our county, and clearly are submitting considerations that are NOT founded on the kind of sound scientific study that your extensive report so obviously is. Thank you for doing the right thing and allowing this project to commence.

Thank you,

Edmond and Grace Anastasi

P.S.: Copies of this letter have been sent to Sheila McDonald and Governor Martin O'Malley.
